

**3D  
TECHNOLOGY  
IN  
TÜRKİYE**

# A YEAR AGO...

**IBB Parks and Gardens Directorate office building (which is the first building in Turkey to use a 3D Printer) is ISTON (Istanbul Concrete Elements and Ready Mixed Concrete Factories Incorporated) which opened its office building for use in the past months, aims to be one of the main elements of a digital transformation in the construction sector.**

Iston Asian Side Facility's manager Vural Öcal said that "3D printer technology submits the opportunity of making production faster also the result of that means it makes things out of itself therefore workmanship is not needed and the labor that was going to waste is much less with 3D technology. In construction sector especially work accidents might be so dangerous therefore 3D technology is pretty much useful for this problem and they think that 3D technology is going to make a lot of changes for the environmental pollution."
